

imaginary. That viewpoint I find all through the book, and there are a great many guesses on the basis of that viewpoint. Now I want to look with you at a few of those guesses tonight, and to show you that those guesses are just guesses, and in some cases they go absolutely contrary to the evidence. As a matter of fact, every one of us⁴ has to, in face of the universe, has to take a definite attitude. We cannot just believe that this world is just a bunch of accidents, as if there was a mountain on top of a lot of big stones and the wind came and they just blew down, and they came down into the valley and just landed in a great big heap. Well,⁴ there are places where that's happened. You see that heap of stones, and you say, well why heap of stones, good for nothing, but when you see some stones that are all arranged in a definite order, and here they go along here, and along here, and along here, and it comes up a certain distance, and then there is a little quadrangular place, and there's some glass you can see through there, and there is a chimney sticking up, and there is some smoke coming out of the chimney, you say, those stones didn't fall off the mountainside and land in this position. There is no accident to this. Somebody arranged them this way. There is somebody connected with this. There is a plan, a purpose to it, and if you want to use that place, you'd better make inquiries.... $4\frac{1}{2}$ and why he made it, and what the situation is, or you may get into trouble. You might say ... $4\frac{1}{2}$ in a way is as ~~if~~ if somebody was to go into the railroad, say the Pennsylvania station in N. Y., you go in there, and you say, well, now I'd like to know what all this means, what's happening here. Well, you see a train come pulling in, and you see a lot of people coming ~~off~~ in, the people get in the train and the train pulls out and you say, what a strange accident. Just the time the people were here, ~~that~~ train happened to come. Isn't that remarkable, and you find several times a day people come in just the time a train comes in, and the train goes out and takes them and they seem to work together, and then other times there are no people there, and there is no train. Well,⁴ somebody said, it is just pure accident. The trains come when they happen to, the people come when they happen to, you'd know that was just nonsense. You know that some mind has planned that. You know that somebody built that station, that somebody planned when the
