

a fairly recent one, then go to one middle, and then one back, and one in the middle again, and then one....11....you see. That is, it doesn't work out in that way. Question: ^{AAM}/ Yes, well, there were long long periods. The Bible doesn't tell us when~~x~~ they were.....11.....it may have been....we don't know...Question..... creation of man....AAM: Well, they might have been before the creation of man, or they might have been after. Question! Could there have been cave men? AAM: Oh, there are cave men today. I was very interested when I was in Palesting, I rode on horseback down through the back gountry of Palestine, and there we came down through that country on the edge of the desert, down through old Jerash which was a Roman city in the time of Christ, which was destroyed by an earthquake about 300~~0~~ a.d., and it was most interesting as you come down the road, to see three civilizations. Over here on the left we saw caves with people living in them, many of them. I was down in Tuccoah, the home of Amos, and there was a cave which had three women living in it, in 1929, there wer three women with about 12 children, who were living in that cave there. In many ..12.today there are people living in caves, and in Jerash there we saw these people living in thes caves on this side, and over on this side here there ~~waxxx~~ ^{were the} columns of this great city, which existed there 1500 years ago. People live in caves in many of our12 $\frac{1}{2}$

Question: In other words, what we are talking about is that the cave men were supposed to have been about 250,000~~0~~ years ago and they have done pa~~o~~intings on the cave wall. Could then, these, as you say, have been diversions of men that were later in the period....How would you explain that they had lived 200,000 years ago? ~~Waxixxx~~ AAM: Well, there are some cases where you can have pretty good evidence of people along time ago. There are other cases where you can't. But in a cave would be very hard to state the time, because you might have geological strata here which took probaly several million years to build, and yet down in the lower part of it there must be a cave where people were living in it just recently. That could easily be, and so it is very hard with a cave that has an opneing where you can get in and out to tell when it was, and now ^{with} the cave was completely covered over with geological strata, then you would have some evi- d~~ance~~ from a very early time~~d~~, and some of these stones seem to be pretty good evi- dence for a very early time, but the actual cave men writings and so on, in most of
