

gave us this revelation, you have that statement which casts great doubt on the idea that the way he did it was by causing one thing to evolve into the other.

.....9.....AAM: Very good, it is a very fine thing. Thought moves forward by giving theories. The more theories you get, the better. But then test it. And call it theory, don't call it fact, until you've gotten the facts to really prove it. Now I think that is a very fine thing. Question:.....

.....10 $\frac{1}{2}$ .....AAM: That was the general view held by the evolutionists 100 years ago, ~~that~~ the view of adaptation, but then as then as they investigated and studied biology, they became very very convinced that acquired characteristics are not transmitted. And they insisted on that. When I was in school, they very tenaciously insisted on that. Acquired characteristics are not transmitted. That's not the foundation. According to that it is a sudden change from one thing to another, and not an adaptation of the circumstances. Well, you have a great many and the ones which suit the circumstances last.....11 $\frac{1}{4}$ .....Well, now they are moving a little bit back in this direction, but there is a lot of theory there that we just don't know anything about. But they have tried many times to cause a change by environmental change, and they claim that it just doesn't....~~12~~ 11 $\frac{1}{2}$

.... that they come as a result of internal rather than external....That's the present view. I am not a biologist. I am only repeating what I understand they say. That's what they were very determined on when I was .....12....and I don't think they've gotten far away from it.....Question: (about man being created in the likeness of God). It says man was created in the likeness of God, and it says that God was a spirit. It means not that our body was like God, but that we like God have power of intellect,...12 $\frac{1}{2}$ ....conscience, we have a spirit like God with certain qualities, and the likeness of God was partially lost as the result of the fall, partially but not.....Question: AAM: Now, we have pictures of the ancient Sumerians, pictures of some of the ancient Egyptians. They are similar to us and yet they differ. They don't differ from us as much as the Chinese and the

~~African negro~~ <sup>Japanese</sup> today, but they differ enough from us that they'd look considerable different if they'd walk down our street. There are many different types of physical appearances, but all, but all within the same main category. Questions:...

AAM: Oh, for instance, it is most likely that Adam and Noah and those people were
