

...when he was a little boy and when his father's business failed in a little town in Austria, and they moved to the big city, and they picked up the little boy half asleep, and carried him as they left ~~his~~ their home and went off on the train, and as they carried him from one train to another, he opened his eyes and saw strange fire suspended in the darkness, horrible flares that he ~~was~~ took to be evil spirits, burning in the hell fire, and he screamed with terror, and he saw these gas lamps there as the family changed trains on this experience in his very young life, and he came to the conclusion later in his life that the shock of this experience resulted in something that caused him these feelings of terror in open spaces and traveling, and later he thought over it, and he thought... $\frac{1}{2}$ ...experience, and realized what it had amounted to.

I was in England in ~~195~~ 1947, and it was sad then to see the little children who had lived through the bombing, the terror and the excitement. I don't know whether the bomb was perhaps as bad as the people with them who were carrying them, that they hurt the nervous system of many a little child, as the ~~shock~~ shock of those experiences were upon them.

Well, Freud was interested as a medical student in trying to heal people, and particularly interested in nerves, and he began to see that there were some physical ailments that you couldn't find a physical cause for, and some of these were known as hysterics. A person would have a  $\rho$  paralysis, and they call this hysteria when you couldn't do anything, when you were paralyzed, and you couldn't find anything wrong with the brain. Of course, the brain can cause hysteria. You can have an injury of the brain. I don't mean hysteria. It will cause paralysis. Many people have it. But he ~~is~~ dissected brains where he found nothing to account for the condition. He found these conditions of paralysis, these strange conditions, and he was interested in trying to help them, and his interest gradually came along to this matter of finding physical results of which no apparent ~~phys~~ physical cause was present, and he worked with different men. He went up to France, and he worked with a man there who was
