

season , his leaf also shall not perish. We have overlooked at the source of the water, we have looked at what is produced by the waters. I have the third element that I would like to glance out it, and that is the availability of the water for the satisfaction of thirst. There, again, you don't realize properly a place where you have lots of water, and I realize that ~~ordinarily~~ ordinarily, perhaps more than a good many people, because of an experience that I had ...just what it means to be in a hot climate and without water at all. In 1944 the Lord enabled me to be instrumental in the rescue of a number of aviators who had been marooned in the Grand Canyon, and the reason I was able in previous years in more than a dozen years, I had taken trips into the Grand Canyon with all my food and most of my water on my back, and I had gone some time two and three weeks off to the Grand Canyon, to ...with a topographic map, that would give the nature of the territory, But in 1943 I might a mistake which might have been tragic ..and I believe that the Lord permitted me to make the mistake in order to drive the understanding of this point home to me in a way that it never could have been otherwise. In 1941 I had gone to a place called ...it is a section where the land juts out into the Grand Canyon about 10 miles and then it drops off on both sides, and the river ...and in 1942 when I went out...I dropped down on the Western side, down to a level about two thirds of the way...and came out ...and then made my way back ..and at about that time I inquired very definitely where I could find water, but I found water in many places that I had not been told of, and I did not realize , or stop to think that the reason was that the strata ~~went down~~ went down toward the West, but that ~~but~~ but ~~made~~ two years later when I decided to go down the Eastern side of the Canyon
