

several others. Well, we have to have a thorough examination to be sure he's competent to stand trial. Perhaps we should put him in the hospital for a few months and then let him go. After all it's not his fault. It's just the result of cause and effect!

Well, God created a cause and effect universe and yet Jesus tells us that not a sparrow falls to the ground without my Father's knowledge. I heard Karl Seagan of Cornell University on the TV the other day. At the end of the hour, Donahue asked him, Do you believe in God? He said, It depends what you mean by God. Some think of God as an old man up in the sky somewhere, that not a sparrow falls without His knowing. Others think of God as the summation of all the forces of the universe. Donahue said, ----- Seagan said, But I know evolution is true, there is no question of that. Donahue said, Someone must have started it, made a start. Seagan said, But Oh maybe it's just gone on like that forever. Maybe way back in infinity there was no start. He said That's incomprehensible, yes, he said, but not impossible!

That is a type of mind, a type of idea that is being disseminated in our day, an attempt of Satan to destroy our realization of the glory of God. But we must recognize that in this cause and effect universe God can make a interfere w if he chooses. And we must recognize often that it is not necessary that He interfere because he can have determined something 50 years ago, 100 years ago that started a cause in process that has an effect on you or me today. He may even have done that 100 years ago in response to our prayers today, because God sees the end from the beginning. I had a friend who was a student at Moody Bible Institute for a while and who got very disgusted. He said, These people will pray for money, and they then go right to the post box and take out an envelope that's got the money in it."God certainly could have acted last week or 100 years ago! in response to your prayer. The power of God to control physical things was brought back to me very very forcibly in 1960. When I was in a car which turned over. I had 8 bones broken; none of them were really serious breaks. After a time in a cast, I reached a point where I got back most of my strength and within a year I felt entirely normal except for one very small thing which still is with me to this day. About 6 or 8 months after it happened there was a reason why it was good for me to get an x-ray. I remembered that when I had been taken to the hospital after this happened after the car had been demolished, in the hospital they had said, We've got
