

but what impressed me more than that was this. They said that it has ~~not~~ now been proven that what you learn in one field helps you in other fields, particularly if as you learn it you are trying to get principles of general thought that will be <sup>consciously</sup> applicable all around. If you ~~constantly~~ are trying to ~~improve~~ improve ~~on~~ your facility of understanding that will be applicable in every ~~fit~~ field of thought to which you may enter. When I was a student ~~as~~ at Princeton Seminary in the last few years before the modernists took over the institution, Princeton Seminary was known at that time, not only as a Seminary which stood for the Word of God, but it was known as a Seminary that had a high standard of ~~word~~ work which it required of its students. Princeton Seminary in those years wasn't very effective in getting the ideas across. There were a great many students who graduated ~~there~~ who came out on the viewpoint of the ~~the~~ Word of God utterly different from ~~me-~~ what most of the professors held there. But this I noticed when I was in Princeton Seminary, that graduates ~~of that~~ institution, ~~now-~~ not only in the Presbyterian Church in a dozen or more other denominations, graduates ~~of that~~ ~~instud-~~ institution were among ~~te-~~ the top leaders in all these various denominations. You would go way off into some distant part of the world and you would find graduates ~~of~~ ~~Pring~~ Princeton Seminary who were in positions of real leadership. Some of them were fundamental, standing strongly for the Word of God. Some of them were among the ~~wor~~ st of the modernists. It was amazing the number of people that graduated from Princeton Seminary in ~~ix~~ those days who went on to take positions of leadership, and the ~~ra-~~ reason for it was because at that time ~~to her~~ other ~~side-~~ seminaries, most of them devoted great attention to frills and methods ~~of~~ of doing this or that while at Princeton they were putting the tremendous main ~~ix~~ emphasis on the ~~th~~ solid thinking and ~~the method-~~ ~~k~~ their people learned to think. They ~~learn~~ learned to use the abilities they had ~~to the~~ and to get the utmost out of them. And so I am not ~~ask~~ asking now how much you learned in ~~the~~ this last year
