

things through than they did you wouldn't be the leader. You must get their advice you must realize you're not so much brighter than they are, but you have the responsibility of leadership. Leadership is necessary, all leaders face dissatisfaction. One reason we have our evaluation is that there is -- are always --- there is not a teacher anywhere but some people thought he was a terrible misfit. And there is probably very few anywhere but that there were one or two that thought he was about the greatest professor that ever was. And it depends, most of these people don't say much. But you get 2 or 3 that talk a lot and you get a great many people that simply echo what they hear, and the result is that if you simply go by what you hear you don't get much idea of the true situation. But if you get everybody to write^{down} on a piece of paper what their judgment is, you find some extremes on everybody, but you get on the whole quite a consensus of what people really think. Well so much perhaps for this difficult position of leadership. If you are going to lead ~~of~~ a church you can't have everybody happy with what you're doing now. But you want to get the best advice you possibly can and try to keep them happy eventually. And then No. 5

5. The Need of Loyal Support in the Outer Parts of the Camp. You're not going to have it. You're going to have dissatisfaction if you're the leader of any sort of a movement. You're going to have dissatisfaction. You're going to have criticism. But I'm speaking now of those who are in the outer part. Because no matter what you're on(?) in our work today, in our world today, you are going to be one who is ~~connected~~ connected with a lot of different activities and you may be the leader in one of these activities but you're going to be one on the outer part as far as some of the other activities are concerned. And if you are going to pick out little things to criticize in these and cut the influence of the leaders you are not going to be rendering the service that you should be rendering. ~~That~~ They say of Thos. A. Edison that when an inventor would come to him with something, Edison would say, Well why don't you do it this way? And he would draw something and he said he didn't spend 2 or 3 days working on it. He simply gave an idea which might have something of help to them, but he said, when they'd look at it and say. O I can do something better than Edison did on this.
