

a man who has -- tends to write things in a rather strong way and tends to criticize very harshly things that he may differ with, and this man wrote me and said. Dr. MacRae, I have seen a publication that has a lot of things said about you which I think are ~~partly~~ partly perhaps half-truths and partly untruths and some very mean things said about you. He said, Would you like to tell me just how you came to leave Faith Seminary? What was the reason for it? And I figured here's a man who publishes a lot of material. a very strong -- I think most of the stands he takes are good stands. I know he has been unjustly attacked and wrongly attacked in the past. But I think he's reacted to it in a way he shouldn't. I wrote him back and I said. I am anxious to go forward constructively to serve the Lord. And I said if someone is doing things in which to a great extent or to many of the things he's doing I can say, I think they are good, I don't want to say anything that is going to attack him or to injure him. Let's go forward and serve the Lord and know that the Lord can vindicate us as far as our honor is concerned. Let's give our interests to making Him known and to advancing His ~~truth~~ truth and showing forth His love and His goodness in our lives.

F. The Quails. The answer: God answered the people's complaint. He provided them meat. He gave them a superfluity of it as we notice

1. The nature of the miracle. We mentioned that briefly last time. There are great migrations of quails that occur in that part of the Mediterranean every year. Back and forth once a year between Europe and Africa. These naturally vary from year to year as all such things in life so. Sometimes they will be far more abundant than others. The Lord used something he already had there. He did not produce something entirely new. But he caused that that year there should be a great many of these quails and He// even today occasionally, a shift in the wind of some cause will make the quails drop on an island/in the Mediterranean. He caused them to shift a bit further East than normal ~~than~~ than they usually do
