Old Testament History

all through the book here and there, yet the main of the book is to present you the facts on the discoveries in the field of archeology which relate to the Bible, and in cases where they are interpreted by conservatives as corroborating the Scripture, or where all have interpreted it in such a way, you will find that statement. If the radical would interpret them another way, he may not say anything about it or he may say, "Now conservatives interpret this this way, but others interpret it this other way." The book has a great deal of very valuable material in it. Unfortunately, the last edition of it is 1937 and of course there has been a great deal done in the course of these last eleven years. Also, in these books, it seems to have taken a good bit of time to run them through the press, because I find that in the different editions, they are usually about a year or two behind the discoveries. Now the other book which I always mentioned twenty years ago is a smaller book, a book by Professor of the University of Chicago, a cousin of Dr. Seville's, by the way, and Professor Price entitled his book--I forget whether it is THE MONUMENTS OF THE OLD TESTAMENT or THE OLD TESTAMENT AND THE MONUMENTS, but it is one or the other of those two. Then, in 1924, a new edition was published which is marked "New and Completely Revised." The previous editions were mostly just . If you come across one of the earlier editions in the book store for about a dime it is well worth it, but I wouldn't recommend that you pay much more for it unless you are particularly interested in the way archeology looked fifty years ago. For that purpose it might be of value. I am glad to have a copy in my own library, but I don't recommend it beyond that. But in 1924 he got out a new and revised edition of it. That is the last edition that was put out and that was very excellent. That edition of 1924--if you come across that edition for \$3.00 or \$4.00 in a second hand store, even though it is only half as big as Barton,
