

had \$10 and somebody has a certain amount of ~~goods~~ goods, the amount of money you have ~~x~~ and the amount of goods they have both enter into the equation of how much the goods are worth. When our Congress spends 30 to 50 billion dollars a year more than they take in, there is that much more added to the price of every single thing we get. We have a condition which has been developing for 15 years. And which has been rapidly going on, and which can easily produce a situation where a group of thugs could take control of our situation.

Worst of all, in this country we have a general attitude which is being engendered by a considerable number of professors and teachers. An attitude that everything we have is bad, and everything the Russians or Chinese have is good. Here's an article I read just 2 or 3 days ago which tells about the starting of a new marxian magazine. This magazine is going to cost about \$4.50 a copy, but they say they have set up a nation~~a~~ wide ~~xxx~~ network of 80 organizational secretaries nearly all Marxian professors. They read manuscripts, scout out potential <sup>writers</sup> ~~writers~~, and subscribers and put the squeeze on their well-heeled contributors. They have already thousands of dollars in hand for the starting of the magazine. Merely a picture of the numbers of supports ~~of~~ we have in this country of the sort of development that came in Russia, in China, and Indo-china. The Russians have increased their power in Europe to such an extent, that though they were tiny compared with our poer there at the end of the last war, today they have nearly a million men under arms compared with 670,000 in NATO. They have 20,000 tanks, compared to 70,000 NATO has; 2800 warplanes compared to 2000 NATO has. 10,000 artilary pieces compared to 2700 that NATO has there. Of course they have had to tell during these past few years starting from the big adventure in Europe, because they have known we have the atom
