

bomb, we have the hydrogen bomb that would do terrible injury to their country if the U.S. decided to enter a war. I wrote a letter to the Chancellor of Germany about 10 years ago. There was talk then of withdrawing a great many American troops. I ^{wrote} saying you should do everything you can to keep American troops there because if the Russians should flood across Germany the U.S. would do nothing unless there was a sizeable group of American troops there for whose sake then would enter. I said it is worth your paying all these things to them to keep a sizeable number of American troops there in Germany. During those years they were held back from any great adventure because of our position to fight and bomb. But they have gained and gone way beyond in many of these regards. Now there has been discovered this neutron bomb. And there are great forces in this country which are demanding we not develop it because, they say, it is so much effective for war that if we have it we are more apt to use it. The thugs that control the Russian government don't care if a million of their people get killed. They are not particularly interested. They would gladly sacrifice a considerable number if necessary. But they have forces poised which would flood across Europe in quick time, and if they did all we could do would be to fire hydrogen bombs ~~or~~ which would devastate a large area. If we had a neutron bomb it would only devastate a small area, and we could destroy their tanks as they ~~g~~ began to move. People say that makes nuclear weapons more effective, so we're more apt to use them so we'd better not have them. So we have an attitude in our country today that no one can predict what the end will be. In the world you shall have tribulation. American Christians have not known what that meant to any great extent in the ~~past~~ past. Today we see the possibility. It could come very rapidly. Developments came very
