

cost me nothing?" I wonder if we are doing that. To use an expression which I believe is familiar in this country. Correct me, of course, if I am wrong. If there is one thing that gets my goat it is to hear a man get up into the pulpit and say, "I am very tired. I have had a wearisome labor." So I trust you will permit me to give you a simple gospel address." I regard that as little short of blasphemy. The gospel is simple to us. It wasn't simple for God. You and I are charged by this text to stand at our work. "A workman that needeth not to be ashamed."

A workman says, "I wouldn't be ~~found~~<sup>seen</sup> dead beside that. It is unworthy of me." That is the standard that God requires. To give our very best to him. ~~The~~ Then just very briefly he tells us we have one instrument for our work. What is a missionary of God, a minister of the gospel, a deaconess, a lay worker? What is their particular job? Well, you read religious magazines. Religious magazines are like people. They are in three classes--good, bad, and indifferent, mostly indifferent. But as you read religious magazines of a certain type, you are told that a clergyman particularly the classman of the clergy, that he must be acquainted with modern problems. If you are to read the magazines carefully, you would imagine that a clergyman would first take a study first in biology, then in psychology, then in geology, then in chemistry so that when he had finished his studies he would be an optiginarian and very<sup>ly</sup> capable of putting any of them into operation. I think that is all nonsense. "Rightly dividing the Word of truth." Now you look at any other ~~science~~ science, you find that the scientist says to you if you ask him a question, "Oh, that is not my department; you go to Mr. so and so." But he doesn't neglect all the other sciences. What he does is, he says, "This is not my particular science, but I must take ~~some~~ cognicence of other scientific departments of research where they impinge on my study." He doesn't pretend if he is a biologist to be a first-class organic chemist. But where organic chemistry touches on his ~~subject~~ subject he says, "Now you tell me what
